

TABLES The table frame, made of melamine-coated wood agglomerate in oak and wengè finishes, has 45 mm thick sides with adjustable chrome-plated steel feet, joined by a front panel and connecting band. The top is 30 mm thick and is also available in 15 mm thick sanded finish glass. There are tables with right and left-hand coplanar extensions which connect to the service modules using a joint, allowing their rotation. The programme includes a service table with chrome-plated steel legs, also available on wheels. A basket can be applied to the tables for holding IT and electric cables, which run downwards through a flexible vertebra applied to the basket itself or directly under the tabletop. Available in various types and sizes, the meeting tables have chrome-plated steel cone-shaped legs and tops which are available in a wengè or oak finish or in sanded glass.

SERVICE UNITS The various types and sizes of service units are independent and set on wheels or can be connected to the tables and coplanar extensions using a joint which allows their rotation. From the single drawer unit with three drawers, to multiple compartments closed by doors or left open, the service units can be accessorised to contain anything from the central unit to the printer, appropriately set on a sliding shelf for ease of use. The structure of the containers is made of wood agglomerate with an aluminium finish, while the perimeter trim (shoulders and tops) is available in oak and wengè finishes.

CONTAINERS All the containers have a structure made of wood agglomerate with an aluminium finish and chrome-plated steel levelling feet, like those on the table. Four freely modular and connecting heights are available. Around the perimeter of the bookcase it is possible to fit tops, under-bases and terminal shoulders which complete the whole composition in oak or wengè finishes. Transparent doors are available with an aluminium perimeter frame and tempered glass. The interior are accessorised with metal shelves which can be spaced at intervals of 32 mm, with practical sliding folder frames available in an aluminium finish as optional accessories.
